Workbase Meet

PARTNERSHIP PROPOSAL

Hosting Future Forward 6.0 on Workbase Meet

A free, data-friendly virtual venue for Zenith Bank's Tech Fair on Wednesday 4 November 2026, built in Lagos for how Nigerians actually connect.

PREPARED FOR
Zenith Bank Plc
Future Forward 6.0 organising team

PREPARED BY
Akinwunmi Femi
Founder, Phantomire Workbase

DATE
19 October 2026

SUMMARY

The full event, hosted free, with no time limit

We would like to host Future Forward 6.0 on Wednesday 4 November 2026 on Workbase Meet, at no cost to Zenith Bank, for as long as the event runs, and to promote it across our channels.

I have attended Future Forward in person, and I know how many developers, founders and students it brings together. Going virtual opens the doors wider, but it also brings a Nigerian problem: data. Workbase Meet was built for exactly that. It shows every attendee how much data they are using, saves data when their network is weak, and reconnects them automatically when the network drops.

THE OFFER

What Zenith Bank gets

ITEM	DETAILS
Virtual venue	A dedicated Future Forward 6.0 event room in webinar format: speakers on stage, the audience watching, with chat, reactions, raised hands and questions.
No time limit	The event runs for as long as your programme needs.
Full attendance record	A downloadable report of every attendee: name, time joined, time left, minutes attended and number of visits.
Recording	Your team can record the full event, saved directly to your own device.
Promotion	We will advertise Future Forward 6.0 across our Instagram, LinkedIn, X, TikTok and WhatsApp channels before, during and after the event. Zenith approves every post.
Event support	Rehearsal sessions with your speakers and our team on standby for the full duration of the event.
Zecathon 6.0 (optional)	The same setup is available, free, for pitch sessions or judges' meetings.
Cost to Zenith Bank	~~₦~~0

In return, we would simply like permission to say that Future Forward 6.0 ran on Workbase Meet.

WHY WORKBASE MEET

Built for Nigerian internet

1 Data saver and live data meter
Attendees see exactly how many MB the event is using. With one tap, data saver keeps the sound and slides and drops video to save data.

2 Reconnects by itself
When an attendee's network drops, the session reconnects automatically. Nobody has to find the link again.

3 No app to download
Attendees join from a link on any phone or laptop browser, by typing their name. No account is needed.

4 Host control
Waiting room, lock the room, mute everyone, remove participants, stop a screen share and bring people on stage.

ON THE DAY

How the event would run

1. **Before doors open**
   Speakers join a backstage check 30 minutes early with our team: sound, camera, slides.
2. **Doors open**
   Attendees join from the event link. A recording notice is shown before they enter if the session is recorded.
3. **Sessions**
   Speakers present with screen sharing. The audience reacts, chats and raises hands; the host brings people up for questions.
4. **After the event**
   Your team downloads the attendance record and keeps the recording. We share a short report of how the event ran.

PRIVACY AND SECURITY

Nothing kept that you didn't ask for

- All audio and video are encrypted in transit and carried on Cloudflare's global network.
- Event chat is deleted the moment the event ends. The meeting record is deleted 7 days later.
- Recordings are never uploaded to us. They are saved only on the recording device.
- The attendance record is available only to the event host.
- We are happy to sign a confidentiality agreement or data processing agreement and to answer your security team's questions.

CAPACITY AND TESTING

Proven before the day, not on the day

Future Forward brings together thousands of people. For an audience that size, we will run the event in webinar format, where only speakers send video and every attendee receives a single, light stream.

Before you commit, we will **load-test the event room to your expected attendance** and share the results with your team. You decide only once you have seen it working at full size.

PLAN

From yes to 4 November

1. **Kick-off call, by Friday 23 October (20 minutes)**
   Agree the format, expected attendance, programme and branding.
2. **Set-up and load test, by Wednesday 28 October**
   We prepare the Future Forward 6.0 event room with your branding and share load-test results at your attendance figure.
3. **Rehearsal, by Friday 30 October**
   A full run-through with your team and speakers on the platform.
4. **Promotion, from Monday 26 October**
   Co-branded posts across our channels, approved by Zenith, counting down to the event.
5. **Event day, Wednesday 4 November**
   Our team on standby from backstage check to close.
6. **Wrap-up, Thursday 5 November**
   Attendance record and recording in your hands; a short report from us.
